

For several years at Seaview Marriott Resort we have had numerous complaints regarding musty and noxious odors in guest rooms and common areas throughout the resort. Each spring at the beginning of the cooling season the odors would return and persist throughout the summer months into fall. We never correctly identified the source until we spoke with you.

Our mechanics used to devote many hours addressing guest complaints until last spring when we began cleaning and treating our guest rooms and common area cooling coils with the AeriGuard products. Since then, the musty odor and guest complaints have virtually disappeared.

The AeriGuard Coil Maintenance Program we have adopted has had a significant effect on our indoor air quality as well as on the air handling equipment. Our service calls are drastically down and the treated air handling equipment is operating efficiently, helping us to keep energy costs in line.

Thank you for introducing AeriGuard to the Seaview Marriott Resort. The products have helped us improve indoor air quality, significantly reduce guest complaints and service calls and improved system efficiency.

Karl Schurr, Chief of Engineering, Seaview Marriott Resort
