Companies Announcements Office
Australian Stock Exchange Limited

Aeris becomes Energy Star Partner in USA and receives USA cold storage approval.

Aeris Environmental LLC (Aeris' USA operating subsidiary) has been accepted as an Energy Star Partner¹ in the USA and named as an "Energy Service and Product Provider" for its AerisGuard Air-Conditioning Performance Solution technology.

The Energy Star program recognises companies with energy efficient products and services who demonstrate that they provide customers with energy savings whilst protecting the environment. For more information visit www.energystar.gov

The Energy Star partnership is the latest recognition of the environmental benefits of the AerisGuard technology and strengthens the Company's status as an emerging international environmental services and cleantech company. Importantly it also fully supports the Company's global supply agreement with Merck & Co to reduce their energy consumption.

Aeris Environmental Ltd has also recently received notification that its core products have received NSF² registration in the USA. The NSF Mark is required by many of the major food related corporations in the USA before products can be used in their facilities. This registration now clears the path for entry into the large USA Food Cold Storage market and allows Aeris to target food manufacturing facilities which have the greatest hygiene requirements as part of their Food Safety Management Plans.

Among other recent news, Aeris Environmental CEO, Huw Jones, spoke to Sky Business News regarding the Company's latest successes, including the agreement with Harrah's Entertainment, together with future opportunities. The interview can be viewed at www.aeris.com.au/IRM/content/skynewsinterview.html

¹ Energy Star is a joint national program of the U.S. Environmental Protection Agency and the U.S. Department of Energy.

² NSF International is the world leader in standards development, product certification, education, and risk-management for public health and safety. The NSF Mark is recognized for its value in international trade around the world and is respected by American regulatory agencies at the local, state, and federal levels.

Huw Jones has also been invited to present the Aeris Environmental opportunity to business leaders and potential investors at the 4th Australasian Cleantech Forum on 11th and 12th March 2008 in Melbourne. See www.cleantechforum.com for more details.

About Aeris Environmental

Aeris Environmental Ltd is an environmental services company focusing on the international environmental hygiene and system performance market. The Company has three core patented technologies centered on multi-enzyme biofilm removal solutions, residual anti-microbial coatings and corrosion protection coatings. Aeris has developed products for application in the air-conditioning and refrigeration service and manufacturing industries together with the large water treatment market.

The AerisGuard Performance Solutions clean and protect air-conditioning and refrigeration systems from commonly occurring bacterial and mould contamination problems. Systems protected by AerisGuard provide significant equipment efficiency, energy reduction, human health and asset management benefits.
